1. The following is an examiner's statement of reasons for allowance: The prior art technique does not teach particularly singularly or in combination the claimed invention such as "a method of characterizing a coded object having a plurality of regions comprising comparing a luminosity value of first region of the object code with the luminosity value of second region of the coded object, wherein the second region's color is known; determining the first region's color based on the comparison of the first and second region's luminosity values" (i.e. claim 31). Additionally, the prior art does not teach various other unique features of the claimed invention such as "comparing luminosity values of all other regions of the coded object with second region's luminosity value" (i.e. claim 32); "second region's color is known to be black (and white)"; and the steps of claim 33, such as, determining first region's color to be either black or white when the first region's luminosity value is either less than or not less than the second region's luminosity value by more than a predetermined constant K. Claim 45 is also novel having unique feature such as "a coded object comprising a plurality of bit objects each having region adjacent to a second region and identifies the coded object from relative positions of the first and second region's color. Claims 54-62 are unique having a computer readable medium containing instructions for characterizing a coded object.
